

In this argument I am going to be arguing in favour of Killing Cane toads. I have read many articles have made me conclude that these pests are Monsters. I will also be considering those arguments in defence of these animals, however my main viewpoint is against these pests.

From my research into looking at cane toad articles, it is obvious that those callous, vile creatures are damaging the native species of Australia. For them to be stopped they should all be exterminated. It may sound horrible to want to kill an animal but it is essential that they should be removed.

Cane toads are "... (Mercer, 2006), which are covered with fat warts, poisonous glands skin. They imported into Australia in 1935 to keep down the population of cane beetles and protect the cane sugar plantations. Unfortunately this plan didn't go as expected because the cane toad colony expanded rapidly.

Why are they a pest? They are dangerous animals that can kill ~~native~~ native creatures and grow at a rapid. They breed and reproduce in large numbers and are hard to stop.

The RSPCA even say that are pests and should be killed. Even though they are living animals, they kill many others and therefore should be killed. They say that they should be killed humanely.

My final view is that they are nasty animals that need to be removed from Australia and sent back to the Amazon because they kill too many others.
